

Electronics management

Vision

“Electronics management” is a web-application that allows users to record and edit information about clients, products and orders.

Application should provide:

- Storing buy orders, clients and products in a database;
- Display list of orders;
- Updating the list of orders (adding, editing, removing);
- Display list of clients;
- Updating the list of clients (adding, editing, removing);
- Display list of products;
- Updating the list of products (adding, editing, removing);
- Display number of the orders for clients and products;
- Filtering by date for orders and clients;
- Filtering by price for products

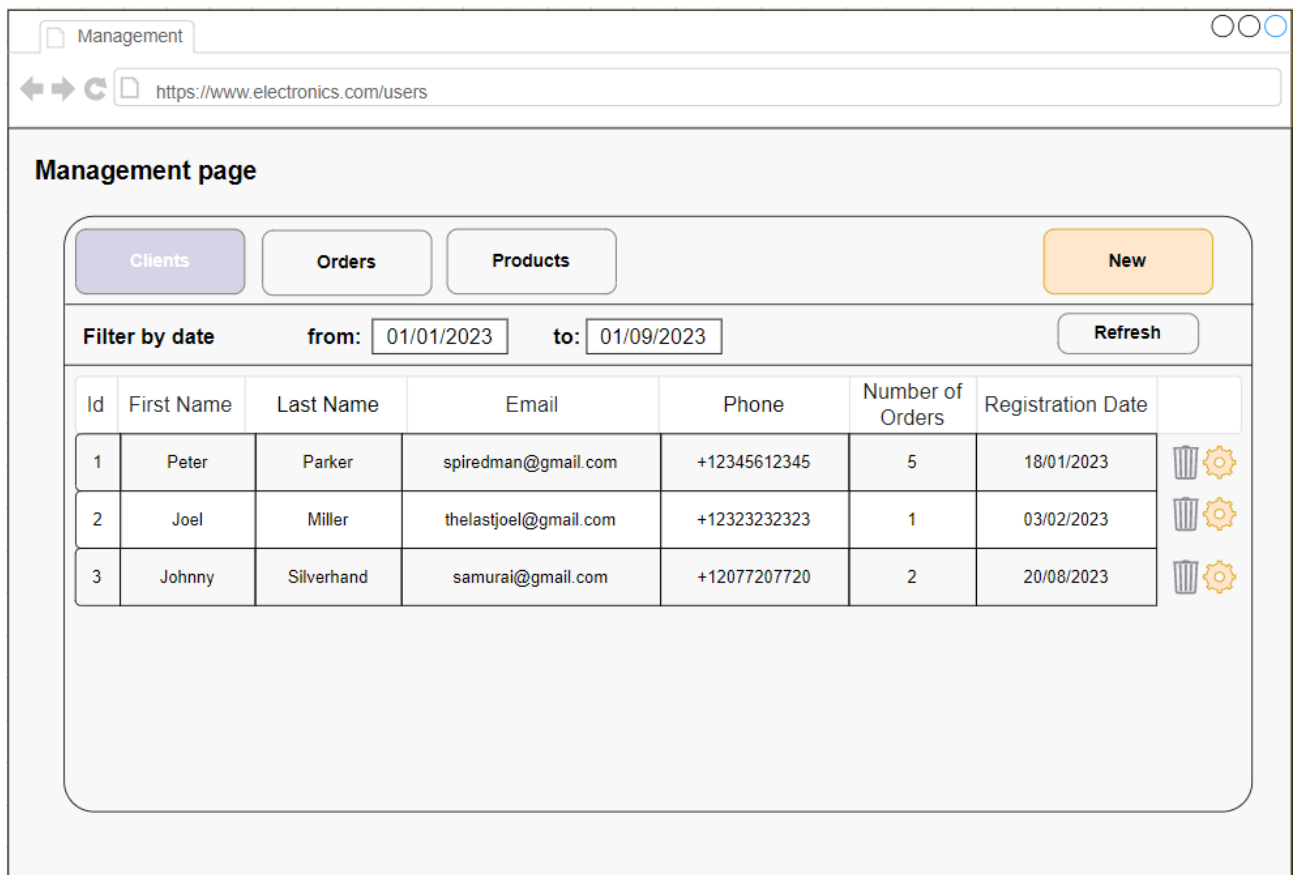

1. Clients

1.1 Display list of clients

The mode is designed to view the list of orders, if it possible to display the number of clients registered for a specified period of time.

Main scenario:

- User selects in menu “Clients”;
- Application displays list of Orders.

Pic. 1.1. The Clients list view.

The list displays:

- Id – the unique number of client
- First name – client`s first name
- Last name – client`s Last name
- Email
- Phone
- Number of orders – amount of orders client made this year
- Registration date – date of creation of account

Filtering by date:

- In the view mode users selects start and end date for filtering and presses the refresh button on the right side;

- The applications displays refreshed list of data in chosen time period.

1.2. Add client

Main scenario:

- User clicks the “New” button in the clients list view mode;
- Application displays form to enter client information;
- User enters order data and presses “Save” button;
- The date of user adding sets automatically;
- If any data is entered incorrectly, incorrect data messages are displayed;
- If entered data is valid, then record is adding to database;
- If error occurs, then error message is displaying;
- If new order record is successfully added, then list of orders with added records is displaying.

Cancel operation scenario:

- User clicks the “New” button in the client list view mode;
- Application displays form to enter client data;
- User enters client data and presses “Cancel” button;
- Data don’t save in data base, then list of orders records is displaying to user.
- If the user selects the menu item "Clients", "Orders" or "Products", the data will not be saved to the database and the corresponding form with updated data will be opened.

The screenshot shows a web browser window with the address bar displaying 'https://www.electronics.com/create_client'. The page content is titled 'Management page' and features three tabs: 'Clients', 'Orders', and 'Products'. The 'Clients' tab is active, showing a form with the following fields and values:

- First name: Mike
- Last name: Vasovski
- Email: vasovskimike@gmail.com
- Phone: +380667352604

At the bottom of the form are two buttons: 'Cancel' and 'Save'.

Pic 1.2. Add new client

When adding a new user such information entered:

- First name
- Last name
- Email
- Phone

1.3. Edit client

Main scenario:

- User clicks the “Edit” button - the gear picture near certain row in the clients list view mode;
- Application displays form to enter client information;
- User enters order data and presses “Save” button;
- If any data is entered incorrectly, incorrect data messages are displayed;
- If entered data is valid, then record is adding to database;
- If error occurs, then error message is displaying;
- If new order record is successfully added, then list of orders with added records is displaying.

Cancel operation scenario:

- User clicks the “New” button in the client list view mode;
- Application displays form to enter client data;
- User enters client data and presses “Cancel” button;
- Data don’t save in data base, then list of clients records is displaying to user.
- If the user selects the menu item "Clients", "Orders" or "Products", the data will not be saved to the database and the corresponding form with updated data will be opened.
